PHILLIP BRUNO

Lead Data Engineer

phillip.bruno@outlook.com | (416) 371-9919 | Toronto, ON | LinkedIn | Portfolio

Professional Summary

Lead Data Engineer with 14+ years in data engineering and analytics, specializing in AWS data platforms. Builds ingestion, orchestration, and warehousing systems processing 50M+ records daily. Hands-on in Python, SQL, and Apache Spark, with experience leading six-person teams in data engineering and BI.

Technical Skills

Cloud Infrastructure (AWS): Lambda, Step Functions, Glue, Redshift, S3, Athena, CloudWatch, EventBridge, EC2, IAM, CloudFormation, CodeBuild, CodePipeline

Data Processing: Spark, PySpark, Apache Airflow (Amazon MWAA), ETL, ELT, data pipelines, batch and streaming ingestion, CDC (Change Data Capture), APIs, event-driven architecture

Languages and Tools: Python, pandas, SQL, Java, Rust, Git, GitHub, Cursor (AI-assisted engineering with human review)

Warehousing and BI: Redshift, Athena, BigQuery, Looker, Tableau, Power BI, QuickSight, schema design, query optimization

Engineering Practices: CI/CD, Infrastructure as Code, data quality, observability, validation

Leadership: technical leadership, people management, mentorship, hiring, stakeholder management, Agile, Scrum

Professional Experience

Lead Data Engineer

Exostatic Inc. June 2021 – Present

- Architected Lambda, Step Functions, and Glue ingestion processing 50M+ records daily with 99% uptime and a 25% improvement in cost and time efficiency.
- Lead a six-person team, set code review standards, mentor engineers, and own the pipeline modernization roadmap.
- Standardized batch and near-real-time onboarding from 15+ sources with Glue (Spark) and Lambda.
- Built data quality and observability on Lambda and Step Functions, cutting data errors 40%.
- Added CodeBuild and CodePipeline CI/CD and CloudFormation-based Infrastructure as Code, cutting deployment time 60%.
- Led migration from Airflow 1.x/2.x to Airflow 3 on Amazon MWAA across 300+ pipelines, reaching near completion in under eight weeks using test-driven development.
- Designed Athena and Redshift schemas for analytics and BI.
- Manage vendor delivery for the data platform.
- Partner with gaming clients on multi-million-dollar title launches.

Senior Manager of Business Intelligence

Omnicom Media Group — December 2019 – June 2021

- Led a six-person BI team, including performance reviews and sprint planning.
- Built AWS, Azure, and GCP ETL workflows that increased processing capacity 5x year over year and eliminated manual processing.
- Added Python and Azure validation (schema, profiling, anomalies), cutting errors 80% for high-value clients.
- Built analytics-ready data for executive reporting.
- Used CDC to track campaign pacing and keep external data in sync.
- Defined ingestion contracts and turned business rules into governed pipelines.

Intermediate Reporting Analyst

Omnicom Media Group — December 2017 – November 2019

- Replaced manual processes with Python scripts, saving close to 1,500 labour hours annually.
- Built Python and SQL reporting and validation for client campaign analytics.

Senior Business Systems Analyst

Rogers Sports and Media — March 2012 – November 2017

- Wrote SQL and Java checks that detected anomalies and prevented hundreds of thousands of dollars in revenue leakage.
- Built a Python framework to audit NHL logs, holding error rates under 1%.
- Built a Python CDC tool to validate NHL ads, holding error rates under 0.1%.
- Turned data-quality SLAs into SQL monitoring.

Education

Bachelor of Arts (Honours): University of Toronto

Project Management Fundamentals: University of Waterloo

Certifications

AWS Certified Cloud Practitioner: Amazon Web Services

AWS Certified Database – Specialty: Amazon Web Services

Awards

Employee of the Year, Rogers (2015); SPOT Award for outstanding performance, Omnicom (2020); Bronze REAP Award, Omnicom
