WORK EXPERIENCE

Lead Data Engineer June 2021 – Present
Exostatic Inc.

- Collaborated with multiple clients in the gaming sector to launch numerous multi-million-dollar budget video games
- Architected AWS-native data ingestion pipelines using Lambda, Step Functions, and Glue, processing 50M+ records daily with 99.9% reliability, achieving 25% operational efficiency gains
- Developed automated data quality and observability frameworks using Lambda and Step Functions orchestration, reducing data errors by 40% and enabling real-time pipeline monitoring
- Implemented batch and near-real-time ingestion patterns from APIs, databases, and file sources using AWS Glue jobs and Lambda triggers, standardizing data onboarding across 15+ source systems
- Built CI/CD automation for data pipelines using CodeBuild and CodePipeline, reducing deployment time by 60% and enabling infrastructure-as-code practices
- Designed Athena and Redshift data warehouse schemas optimizing query performance for analytics workloads, supporting downstream BI and reporting use cases

Sr. Manager of Business Intelligence December 2019 – June 2021
Intermediate Reporting Analyst December 2017 – November 2019
Omnicom Media Group

- Engineered AWS, Azure, and GCP-based ETL workflows, boosting operational efficiency by 500% YOY and eliminating manual data processing
- Built automated data validation frameworks with Python and Azure, implementing schema validation, data profiling, and anomaly detection, reducing errors by 80% for high value clients
- Implemented CDC (Change Data Capture) techniques to monitor external teams' campaign pacing and data synchronization
- Engineered reliable analytics-ready data layers that powered executive reporting, enabling senior leadership to derive real-time strategic insights
- Partnered with business owners to define data ingestion contracts and technical specifications, translating complex business rules into governed data pipelines
- Deprecated manual data processes by deploying Python-based automation scripts, achieving a 2,000-hour annual reduction in operational overhead

EDUCATION

Bachelor of Arts (Honours)
University of Toronto

Project Management
Fundamentals
University of Waterloo

Certified Cloud Practitioner
Amazon Web Services

Certified Database Speciality
Amazon Web Services

TECHNICAL SKILLS

Cloud Infrastructure: Lambda, Step Functions, Glue, Redshift, CodeBuild, CodePipeline, S3, Athena, CloudWatch, EventBridge, EC2, IAM

Data Integration: Batch & streaming ingestion, CDC patterns, API integration, event-driven architectures, ETL/ELT workflows

Languages & Tools: Python (boto3, pandas, SQLAlchemy), SQL, Java, Rust, Visual Basic

Data Warehousing & BI: Redshift, Athena, Azure, Big Query, Looker, Tableau, Power BI, QuickSight, Google Data Studio

Rogers Communications Inc.

- Developed automated SQL and Java scripts to detect data anomalies and integrity issues, preventing hundreds of thousands in revenue leakage through initiative-taking fault detection
- Engineered a Python-based data validation framework to audit high-volume NHL log data, implementing automated quality checks that reduced error rates to <1%.
- Developed a tool using Python and CDC techniques for validating NHL advertisements for Rogers' advertising clients, ensuring accuracy, and maintaining an error rate of <1%
- Partnered with business stakeholders to define data quality SLAs and technical specifications, translating complex business rules into SQL logic for automated monitoring

AWARDS

Spot Award | Omnicom (2020)
REAP Award | Omnicom (2020)
Platinum Winner | Rogers (2018)
Sales Ops WOW | Rogers (2017)
Employee of the Year | Rogers (2015)
